WebDT Mobile Tablet Receives Highest Honor in Industrial PC Category for Reliable Design, Flexibility and Remote Device Management

DT Research™, Inc., an industry leader in the development of information appliances for vertical markets, today announced that it has been awarded a Best Choice of COMPUTEX Taipei 2008 Award. The WebDT Mobile Tablet received the highest honor in the Industrial PC (IPC) category for being the first mobile tablet to provide options for an integrated barcode scanner, card reader and camera. The WebDT Mobile Tablet was recognized for its reliable design, hardware and software flexibility and comprehensive device management software.

The Best Choice of COMPUTEX Taipei 2008 Award was presented to DT Research by Yen-Shiang Shih, Deputy Minister of Economic Affairs, Taiwan, at the COMPUTEX 2008 opening ceremony held on Wednesday, June 3 at the Taipei World Trade Center Nangang Exhibition Hall.

Now in its seventh year, the Best Choice award is considered one of the world's most prestigious awards for outstanding Information and Communications Technology (ICT) products. The awards are judged based on technological development, innovation and international sales potential. Winners for 2008 were selected from 420 nominations received from over 200 exhibitors at COMPUTEX Taipei 2008. Awards are given in only 18 categories – from IPC, Software, Embedded System Products, and Data Storage, to Green IT Products, Peripherals and Accessories.

The WebDT Mobile Tablet received the Best Choice award for IPCs based on its reliable design and software/hardware customization. In addition, it is the first industrial mobile tablet to integrate a barcode scanner, magnetic card reader and camera, delivering a point-of-service mobile device that can significantly improve customer service and data accuracy through the automatic capture of information. The judges also recognized the WebDT Mobile Tablets' intuitive device management software, which provides the convenience of comprehensive remote device administration.

"DT Research is committed to delivering innovative mobile tablet solutions to address the evolving needs in today's competitive markets," said Dr. Daw Tsai, president of DT Research. "We created an industrial mobile tablet that integrates commonly-used hardware applications to enable quick access to information, thereby improving customer service and data accuracy for businesses. We are honored to have been recognized by the industry and to receive the Best Choice Award for Industrial PCs at COMPUTEX 2008."

COMPUTEX Taipei 2008 is organized by the Taiwan External Trade Development Council (TAITRA) and the Taipei Computer Association (TCA). The event is the leading professional export exhibition in Taiwan and is the largest electronics show in Asia.
